## Major parts of my proposal documentation

### ➤ Short Description

- The problem I am going to solve is “**Scholarship Management System**” because I always wanted that everyone should study regardless of financial issues. As the world is now going towards computing so I think I should also participate to make our nation better.

### ➤ Users of Application

- There are **four users** of my application who are dependent on each other as follow:

- Here, Admin can control all the others, but others can only have access on their own record.

### ➤ Functional Requirements

- Here are the functional requirements of all the users are:

<i>User ID</i>	<i>As a</i>	<i>I can perform</i>
<b>1</b>	<b>Admin</b>	Add any Donor.
		Remove any Donor.
		View all Donors record.
		Do any change in Donor's record.
		Sort Donor's record.
		Search from Donor's record.
		View amount of total donations.
		Add any Taker.
		Remove any Taker.
		View all Taker's result.
		Do any change in Taker's record.
		Sort Taker's records.
		Search from Taker's record.
		View total amount that donated to students.
		Merge both parties record then do any change.
		View feedbacks

<i>User ID</i>	<i>As a</i>	<i>I can Perform</i>
